AI Summary

- Analytical classification
- Description: PowerShell-based execution chain with Cobalt Strike detection
 - Tags & interpretation:
 - arch-scr: Arch scr signal.
 - api-base64: Api base64 signal.
 - susp-powershell: Susp powershell signal.
 - cobaltstrike: Cobaltstrike signal.
 - Threat level: Malicious activity
 - Main analyzed object: <https://download.cyberlearn.academy/download/download?url=https://files-ls.s3.us-east-2.amazonaws.com/b9a7a76320ebefc19ae65c56c45f311e.rar>

Executive summary

The execution begins with a download from the short display URL, which triggers a PowerShell-based attack chain. The malicious script bypasses execution policies and executes Cobalt Strike, indicating a likely objective of establishing a backdoor or C2 communication. The strongest supporting observation is the detection of Cobalt Strike via YARA rules.

Attack chain

- The user navigates to the short display URL, which initiates a download of a RAR file hosted on an Amazon S3 bucket.
- WinRAR is used to extract the contents, which include a PowerShell script (`endpoint.ps1`).
- PowerShell is executed with bypassed execution policies and hidden banners, indicating an attempt to evade detection.
- The script executes a second PowerShell process with additional obfuscation and bypasses profile loading.
- Cobalt Strike is detected via YARA rules, with a C2 endpoint identified at `secdisks.com/safebrowsing/rd/C1t0b12nLW1IbHehcmUtd2hUdmFzEBAY7-0KI0kUDC7h2` .
- The chain ends with the execution of Cobalt Strike, but no further network activity or credential collection is observed.

Infrastructure & techniques

The attack leverages a legitimate Amazon S3 bucket as a download source, which is incidental context rather than core attacker infrastructure. The malicious payload is delivered via a RAR file, which is extracted and executed using PowerShell. The use of PowerShell with bypassed execution policies and hidden banners suggests an attempt to evade detection. Cobalt Strike is detected as the malware, with a C2 endpoint identified at `secdisks.com/safebrowsing/rd/C1t0b12nLW1IbHehcmUtd2hUdmFzEBAY7-0KI0kUDC7h2` , indicating a likely backdoor or command-and-control communication.

Conclusion

The execution chain strongly suggests a Cobalt Strike-based attack, likely aimed at establishing a backdoor or C2 communication. The most important detection hook is the presence of Cobalt Strike via YARA rules. The flow appears to be a reusable phishing workflow, leveraging a legitimate CDN for initial delivery. The C2 endpoint `secdisks.com/safebrowsing/rd/C1t0b12nLW1IbHehcmUtd2hUdmFzEBAY7-0KI0kUDC7h2` is a key suspicious host to monitor.

AI Recommendations

🔔 Auto-generated from sandbox analysis data. Always validate before use. The final decision is yours.

Phase 1. Detect

1.1. Process Spawn Analysis (D3-PSA)

- COVERS: T1082, T1140, T1562.001
- WHY: Process Spawn Analysis can surface the observed behavior because the case touches Create Process.
- ACTIONS:

☐ Alert: `powershell.exe` spawned by a process outside `C:\Windows\System32\` or by a non-administrative parent process.

☐ Sysmon Event ID 1 / Security 4688: alert on hidden or encoded PowerShell invoking `Set-MpPreference` , `Add-MpPreference` , `DisableRealtimeMonitoring` , `ExclusionProcess` , or `ExclusionPath` .

- LOG SOURCES: Sysmon Event ID 1, Windows Security 4688, EDR process graph

1.2. System Call Analysis (D3-SCA)

COVERS: T1012, T1082, T1140

WHY: System Call Analysis can surface the observed behavior because the case touches System Call.

ACTIONS:

Create SIEM rule: Defender exclusions or realtime-monitoring changes performed by user-launched PowerShell or a payload outside trusted admin paths.

Monitor Defender settings, exclusions, and security-policy changes from the same process chain that executed the sample.

LOG SOURCES: Registry auditing, System Event Log, EDR telemetry

1.3. File Integrity Monitoring (D3-FIM)

COVERS: T1059.001, T1140, T1204.002

WHY: File Integrity Monitoring can surface the observed behavior because the case touches File.

ACTIONS:

Alert: powershell.exe spawned by powershell.exe outside a standard administrative path.

Alert: powershell.exe spawned by WinRAR.exe outside a standard administrative path.

LOG SOURCES: Sysmon Event ID 11, File integrity monitoring, EDR file telemetry

1.4. Review non-whitelisted network destinations (manual)

WHY: These destinations are not whitelisted, but they also do not carry a confirmed malicious reputation. Validate them in network and process telemetry before turning them into containment targets.

ACTIONS:

Review proxy, DNS, TLS, and parent-process telemetry for download.cyberlearn.academy , previews.123rf.com , secdisks.com and confirm whether the requests belong to the malicious chain or to background application traffic.

Do not create a global block for these destinations while their reputation remains uncertain; escalate to containment only if follow-on evidence or threat intelligence confirms them as malicious.

LOG SOURCES: Proxy logs, DNS logs, TLS telemetry, EDR process graph

Phase 2. Isolate

2.1. System Call Filtering (D3-SCF)

COVERS: T1012, T1082, T1140, T1562.001

WHY: System Call Filtering can constrain or suppress the observed behavior by acting on System Call.

ACTIONS:

Alert: powershell.exe spawned by powershell.exe outside a standard administrative path.

Alert: powershell.exe spawned by WinRAR.exe outside a standard administrative path.

LOG SOURCES: Registry auditing, System Event Log, EDR telemetry

2.2. Executable Denylisting (D3-EDL)

COVERS: T1059.001, T1140, T1204.002, T1082

WHY: Executable Denylisting can constrain or suppress the observed behavior by acting on Executable File.

ACTIONS:

Alert: powershell.exe spawned by powershell.exe outside a standard administrative path.

Alert: powershell.exe spawned by WinRAR.exe outside a standard administrative path.

LOG SOURCES: WDAC or AppLocker logs, EDR policy events, Process execution logs

2.3. Executable Allowlisting (D3-EAL)

COVERS: T1059.001, T1140, T1204.002, T1082

WHY: Executable Allowlisting can constrain or suppress the observed behavior by acting on Executable File.

ACTIONS:

Alert: powershell.exe spawned by powershell.exe outside a standard administrative path.

Alert: powershell.exe spawned by WinRAR.exe outside a standard administrative path.

LOG SOURCES: WDAC or AppLocker logs, EDR policy events, Process execution logs

Phase 3. Evict

3.1. Object Eviction (manual)

COVERS: T1562.001, T1059.001

WHY: Dropped, staged, or modified artifacts should be removed after evidence preservation. Legitimate user-application caches, system binaries, and default crash-report artifacts are intentionally excluded.

ACTIONS:

Quarantine or delete the observed malicious or manipulated artifacts after forensic collection:

C:\Users\admin\Desktop\endpoint.ps1

C:\Users\admin\AppData\Local\Temp_PSScriptPolicyTest_yz1i1uri.tdo.ps1

C:\Users\admin\AppData\Local\Temp_PSScriptPolicyTest_w5suc32b.dyi.ps1

C:\Users\admin\AppData\Local\Temp_PSScriptPolicyTest_totjrnor.ytu.ps1

C:\Users\admin\AppData\Local\Temp_PSScriptPolicyTest_m0bbbaob.apa.ps1

C:\Users\admin\AppData\Local\Temp_PSScriptPolicyTest_lvwy1bm1.ywx.ps1

C:\Users\admin\AppData\Local\Temp_PSScriptPolicyTest_dwnudh5g.byx.ps1

https://any.run/report/a01bc64b-149c-4c3c-8928-29e9d3178698/summary/brief

2/11

- C:\Users\admin\AppData\Local\Temp__PSScriptPolicyTest_4tjzvycv.wgx.ps1
- C:\Users\admin\AppData\Local\Temp__PSScriptPolicyTest_0bn1z352.2oa.ps1
- c:\users\admin\downloads\b9a7a76320ebefc19ae65c56c45f311e.rar

- ☐ Sweep the estate for the same filenames, hashes, domains, or parent-child execution chain before closing containment.
- [LOG SOURCES](#): EDR host response, File collection telemetry

3.2. Terminate Malicious Process Chain (manual)

- [COVERS](#): T1562.001, T1059.001
 - [WHY](#): Only clearly suspicious child processes or manipulated binaries are targeted for termination; legitimate user applications and normal system processes are excluded.
 - [ACTIONS](#):
- ☐ Terminate or isolate surviving instances of powershell.exe started by powershell.exe after preserving process ancestry and file hashes.
- ☐ Terminate or isolate surviving instances of rundll32.exe started by the suspicious parent after preserving process ancestry and file hashes.
- ☐ Terminate or isolate surviving instances of WinRAR.exe started by the suspicious parent after preserving process ancestry and file hashes.
- [LOG SOURCES](#): EDR process graph, Sysmon Event ID 1, Windows Security 4688

Phase 4. Restore

4.1. Recovery and Restoration (manual)

- [WHY](#): Observed tampering, credential exposure, or lure-driven user interaction creates concrete restoration tasks after containment.
 - [ACTIONS](#):
- ☐ Restore Microsoft Defender preferences by re-enabling real-time monitoring and removing unauthorized process or path exclusions.
- ☐ Validate AMSI and ETW functionality after cleanup and review whether hidden PowerShell encoded commands changed security policy settings.
- [LOG SOURCES](#): Windows Event Logs, Directory or identity telemetry, Configuration management, EDR telemetry

Phase 5. Harden

5.1. System Configuration Permissions (D3-SCP)

- [COVERS](#): T1012
 - [WHY](#): System Configuration Permissions can be turned into a durable preventive control for System Configuration Database.
 - [ACTIONS](#):
- ☐ Create SIEM rule: Defender exclusions or realtime-monitoring changes performed by user-launched PowerShell or a payload outside trusted admin paths.
- ☐ Monitor Defender settings, exclusions, and security-policy changes from the same process chain that executed the sample.
- [LOG SOURCES](#): Registry auditing, System Event Log, EDR telemetry

5.2. File Encryption (D3-FE)

- [COVERS](#): T1059.001, T1140, T1204.002
 - [WHY](#): File Encryption can be turned into a durable preventive control for File.
 - [ACTIONS](#):
- ☐ Alert: powershell.exe spawned by powershell.exe outside a standard administrative path.
- ☐ Alert: powershell.exe spawned by WinRAR.exe outside a standard administrative path.
- [LOG SOURCES](#): EDR telemetry, Windows Event Logs

Phase 6. Model / Deceive

6.1. Decoy File (D3-DF)

- [COVERS](#): T1059.001, T1140, T1204.002
 - [WHY](#): Decoy File can be turned into a durable preventive control for File.
 - [ACTIONS](#):
- ☐ Alert: powershell.exe spawned by powershell.exe outside a standard administrative path.
- ☐ Alert: powershell.exe spawned by WinRAR.exe outside a standard administrative path.
- [LOG SOURCES](#): Sysmon Event ID 11, Canary file alerts, EDR telemetry

Coverage Matrix

Open Questions

1. What exact Defender exclusions, disabled features, or tampered security settings were applied by the malicious chain? (why: This determines the true containment scope and which host protections must be restored.)

2. What was the full execution chain and payload scope of C:\Users\admin\Desktop\endpoint.ps1 after it was written or staged on disk? (why: This determines whether the case stopped at staging or progressed into confirmed second-stage execution.)

3. What exact commands were present in the dropped or executed script artifact, and what side effects did it produce? (why: The script contents can reveal additional defense-evasion, download, or cleanup steps that are not visible in the compact summary.)

4. What additional telemetry from the truncated or compacted sections is required to resolve this gap: The compact summary truncated some sections: incidents, files.? (why: Missing sections can hide follow-on process, file, or network activity that changes containment scope.)

Action Checklist

Immediate

☐ Alert: powershell.exe spawned by a process outside C:\Windows\System32\ or by a non-administrative parent process.

☐ Sysmon Event ID 1 / Security 4688: alert on hidden or encoded PowerShell invoking Set-MpPreference , Add-MpPreference , DisableRealtimeMonitoring , ExclusionProcess , or ExclusionPath .

☐ Create SIEM rule: Defender exclusions or realtime-monitoring changes performed by user-launched PowerShell or a payload outside trusted admin paths.

☐ Monitor Defender settings, exclusions, and security-policy changes from the same process chain that executed the sample.

☐ Alert: powershell.exe spawned by powershell.exe outside a standard administrative path.

☐ Review proxy, DNS, TLS, and parent-process telemetry for download.cyberlearn.academy , previews.123rf.com , secdisks.com and confirm whether the requests belong to the malicious chain or to background application traffic.

☐ Do not create a global block for these destinations while their reputation remains uncertain; escalate to containment only if follow-on evidence or threat intelligence confirms them as malicious.

Post-containment

☐ Quarantine or delete the observed malicious or manipulated artifacts after forensic collection:

C:\Users\admin\Desktop\endpoint.ps1

C:\Users\admin\AppData\Local\Temp_PSScriptPolicyTest_yz1i1uri.tdo.ps1

C:\Users\admin\AppData\Local\Temp_PSScriptPolicyTest_w5suc32b.dyi.ps1

C:\Users\admin\AppData\Local\Temp_PSScriptPolicyTest_totjrnor.ytu.ps1

C:\Users\admin\AppData\Local\Temp_PSScriptPolicyTest_m0bbbbaob.apa.ps1

C:\Users\admin\AppData\Local\Temp_PSScriptPolicyTest_lvwylbm1.ywx.ps1

C:\Users\admin\AppData\Local\Temp_PSScriptPolicyTest_dwnudh5g.byx.ps1

C:\Users\admin\AppData\Local\Temp_PSScriptPolicyTest_4tjzvycv.wgx.ps1

C:\Users\admin\AppData\Local\Temp_PSScriptPolicyTest_0bn1z352.2oa.ps1

c:\users\admin\downloads\b9a7a76320ebefc19ae65c56c45f311e.rar

☐ Sweep the estate for the same filenames, hashes, domains, or parent-child execution chain before closing containment.

☐ Terminate or isolate surviving instances of powershell.exe started by powershell.exe after preserving process ancestry and file hashes.

☐ Restore Microsoft Defender preferences by re-enabling real-time monitoring and removing unauthorized process or path exclusions.

☐ Validate AMSI and ETW functionality after cleanup and review whether hidden PowerShell encoded commands changed security policy settings.

Hardening

☐ Create SIEM rule: Defender exclusions or realtime-monitoring changes performed by user-launched PowerShell or a payload outside trusted admin paths.

☐ Monitor Defender settings, exclusions, and security-policy changes from the same process chain that executed the sample.

☐ Alert: powershell.exe spawned by powershell.exe outside a standard administrative path.
